

## **Increase in Long-Term Firm North to South Offerings on BPAT's Share of the COI**

BPAT has completed a review of the amount of transmission to offer for long-term firm north to south service over BPAT's share of the COI. Based upon this review, BPAT has decided to increase its long-term firm north to south COI offerings. These new offerings will be based on an assumed COI north to south transfer capability of 4250MW which yields a BPAT share of 2419MW. The new offerings will be effective April 1, 2002. BPAT will apply the resulting ATC to long-term requests currently pending in the queue and will make contract offers as appropriate.
